                                                                                                                                                                                                                                                                                                                                            The present invention relates to an isolated p38/JTV-1 protein for use as CC medicament. The p38/JTV-1 protein or the pharmaceutical composition is CC useful as medicament for treating breast cancer, large intestinal cancer, CC lung cancer, small cell lung cancer, stomach cancer, liver cancer, blood CC cancer, bone cancer, pancreatic cancer, skin cancer, liver cancer, blood CC cancer, bone cancer, pancreatic cancer, skin cancer, head or neck cancer, CC cutaneous or intraocular melanoma, uterine sarcoma, ovarian cancer, cC endometrial carcinoma, cervical cancer, fallopian tube carcinoma, CC endometrial cancer, colon cancer, small intestine cancer, endocrine CC loukemia, thyroid cancer, parathyroid cancer, small intestine cancer, soft tissue cumour, urethral cancer, parathyroid cancer, adrenal cancer, soft tissue CC loukemia, lymphocytic lymphoma, bladder cancer, kidney cancer, ureter CC cancer, renal cell carcinoma, renal pelvic carcinoma, CNS tumour, primary CC adenoma, or their combination. The protein is useful as a target for Screening new anticancer agents. The protein is useful as a target for 1 cancer.
                                                                                                                                                                                                                                Query Match

The present invention describes substantially purified human proteins CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 or the specification). ABM15762 to ABM27252 encode the human ORFX or the proteins given in ABM15762 to ABM27252 encode the human ORFX CC proteins given in ABM00010 to ABM15010. ORFX proteins are useful for creating or preventing a pathology associated with an ORFX-associated of controlled with ORFX-associated with an ORFX sequences can be used in gene therapy. ORFX sequences can be used in the controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled controlled contro

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL0140-ABL16175) and the encoded proteins (ABB57737-BB7272). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

n
    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                         Score

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                     105.5

-I-FUNCTION: Probable core protein of the multisynthetase complex that serves as a template for the assembly of the supramolecular structure. Mediates ubiquitination of FUBP1 and its degradation b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     INTERACTION WITH FUBP1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the proteasome.

SUBUNIT: Component of the multisynthetase complex which is comprised of a bifunctional glutamyl-prolyl-tRNA synthetase, monospecific isoleucyl, leucyl, glutaminyl, methionyl, lysyl, arginyl, and aspartyl-tRNA synthetases as well as three auxil proteins, p18, p48 and p43. Binds FUBP1.

SIMILARITY: Contains 1 GST-like domain.

CAUTION: Ref. 1 sequence differs from that shown due to a frameshift in position 312.
                                                                                                                                      301
                                                                                                                                                                          241

SUBUNIT: Component of the multisynthetase complex which is comprised of a bifunctional glutawyl prolyf-tRNA synthetase, the monospecific isoleucyl, leucyl, glutaminyl, methionyl, lysyl, arginyl, and aspartyl-tRNA synthetases as well as three auxiliary proteins, p18, p48 and p43.

SIMILARITY: Contains 1 GST-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mol. Biol. 285:183-195(1999).
FUNCTION: Probable core protein of the multisynthetase complex that serves as a template for the assembly of the supramolecul.

FUNCTION: Probable core protein of the multisynthetase comple that serves as a template for the assembly of the supramolect structure (By similarity).

SUBUNIT: Component of the multisynthetase complex which is comprised of a bifunctional glutamyl-prolyl-tRNA synthetase, monospecific isoleucyl, leucyl, glutaminyl, methionyl, lysyl, arginyl, and aspartyl-tRNA synthetases as well as three auxil proteins, p18, p48 and p43 (By similarity).

SIMILARITY: Contains 1 GST-like domain.
                                                                                                             three auxiliary

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal

New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc subjected to pain, a method for identifying a compound which regulates cc the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the cc polynucleotides, a method for producing a pharmaceutical composition, a cc method for identifying a compound or small molecule that regulates the cc specification, a method for identifying a compound useful in treating cp polypeptides or their antibodies. The polynucleotide or the treating cc modulates its activity is useful for preparing a medicament for treating cc modulates its activity is useful for preparing a medicament for treating cc injury (CT) and spared nerve injury (Chung), chronic constriction cc injury). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: specification, but was obtained in electronic form directly from WIPO at cr from wire int/win/ininienal nerve amenage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human tumour-associated antigenic target (TAT) CC polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in CC sequences at least 80% identical to the TAT nucleic acid and polypeptide CC polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; apeptide or organic CC molecule which binds to a TAT polypeptide; fusion proteins comprising a CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, and methods and compositions for the treatment or CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful CC increased TAT expression, particularly cancers such as breast cancer, CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central CC used as hybridisation probes, in chromosome and gene mapping, in CC chromosome identification and in gene therapy. The present sequence corporates a TAT polypeptide of the invention

The JTV1 coding sequence is located upstream from hPMS2. JTV1 cDNA can be used as probes to detect chromosome 7 deletions involving JTV1. Due to the overlapping promoter regions, deletions of JTV1 would also affect PMS2 (a mismatch repair gene) expression, leading to hereditary non-polyposis colorectal cancer. JTV1 can also be used to assay activity or competence of the PMS2 promoter region, the presence of TV1 suggesting that the PMS2 promoter is intact. JTV1 sequences can also be used to guide homologous recombination at the PMS2 locus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TVT

                                                                                                                                           The present invention relates to an isolated p38/JTV-1 protein for use as CC medicament. The p38/JTV-1 protein or the pharmaceutical composition is CC useful as medicament for treating breast cancer, large intestinal cancer, CC lung cancer, small cell lung cancer, stomach cancer, liver cancer, blood cancer, bone cancer, pancreatic cancer, skin cancer, liver cancer, blood cancer, bone cancer, pancreatic cancer, skin cancer, head or neck cancer, CC cutaneous or intraocular melanoma, uterine sarcoma, ovarian cancer, cc rectal cancer, anal cancer, colon cancer, fallopian tube carcinoma, CC endometrial carcinoma, cervical cancer, vulval cancer, vaginal carcinoma, CC endometrial carcinoma, cervical cancer, small intestine cancer, endocrine cancer, thyroid cancer, penile cancer, small intestine cancer, soft tissue cancer, thyroid cancer, penile cancer, prostate cancer, chronic or acute cumour, urethral cancer, penile cancer, prostate cancer, chronic or acute concer, renal cell carcinoma, bladder cancer, kidney cancer, ureter CC cancer, renal cell carcinoma, renal pelvic carcinoma, CNS tumour, primary CC sacer, renal cell carcinoma, renal pelvic carcinoma, CNS tumour, brimary concernor new anticarcer sacer. The protein is useful as a target for acreament and pelvic carcinoma, cancer, acreament cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated p38/JTV-1 protein, useful as medicament for treating cancer e.g., stomach, liver, blood, bone, pancreatic, skin, head or neck cancer and cutaneous or intraocular melanoma, as well as for screening new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2004-627822/61.

The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to one of the

                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                              The present invention relates to an isolated p38/JTV-1 protein for use as CC medicament. The p38/JTV-1 protein or the pharmaceutical composition is CC useful as medicament for treating breast cancer, large intestinal cancer, CC lung cancer small cell lung cancer, stomach cancer, liver cancer, blood CC cancer, bone cancer, pancreatic cancer, skin cancer, head or neck cancer, CC cutaneous or intraocular melanoma, uterine sarcoma, ovarian cancer, blood CC cancer, anal cancer, colon cancer, fallopian tube carcinoma, CC endometrial carcinoma, cervical cancer, vulval cancer, vaginal carcinoma, CC endometrial carcinoma, cervical cancer, small intestine cancer, endocrine CC cancer, thyroid cancer, parathyroid cancer, sdrenal cancer, endocrine CC cancer, urethral cancer, parathyroid cancer, adrenal cancer, ureter CC cancer, renal cell carcinoma, bladder cancer, kidney cancer, ureter CC cancer, renal cell carcinoma, bladder cancer, kidney cancer, ureter CC cancer, renal cell carcinoma, brain stem nerve gliomas, pituitary CC adenoma, or their combination. The protein is useful as a target for CC screening new anticancer agents. The present sequence represents the 1-CC lamino acid sequence of p38/JTV-1 protein.
                                                                                                                                                                                                                                               Query Match

ABN15762 to ABN27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide syndrome associated with ORFX-associated disorder. ORFX polymucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 2986; 1037pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
